FILLERS & VOLUMIZING

What is volume loss?

As we age, it's common to lose fat in many areas of the face and hands, causing the skin to appear hollow and flat.

Hollow cheeks, deep laugh lines and circles under the eyes are common results of facial volume loss. Thin-skinned, bony looking hands are the result of volume loss in the hands.

Fillers and volumizing can help restore youthful contours to your face and more, all in one or two visits.

What can be done to correct this volume loss?

In the last few years, safe and effective facial fillers have been developed to allow instant correction of facial volume loss. These include: Restylane (Lyft, Silk, Defyne, Refyne), Juvederm, Sculptra, Radiesse, Belotero, Volbella and Voluma.

How is the treatment performed?

Volume correction is an in-and-out clinical treatment. Topical numbing cream is applied to the areas in need of volumizing; local anesthetic may also be added to the fillers. Most patients experience only mild discomfort.

Fillers are injected into the areas of volume loss giving immediate improvement! Pressure and ice may be applied for a few minutes to decrease the risk of bruising or swelling. Makeup can be applied immediately after treatment.

Call the Gateway Aesthetic Institute & Laser Center at (801) 595-1600 to schedule a consultation.

We have over 30 years of experience with fillers and volumizing and are ready to help improve the appearance of your skin.

We are located at the south end of the Gateway Mall at 440 West 200 South, Suite 250, Salt Lake City, Utah 84101.
